

The **eSeries** Administrative Console adds flexibility to Telecor's **eSeries** next-generation full-featured intercom system. The eConsole can quickly establish high-definition two-way voice communication with any other **eSeries** Console, Ceiling Speaker, or Wall Station. Paging announcements and audio source distribution are also made easily using the Console's feature keys.

All you need to do is **Just Plug It In!**™

Standard Features:

- Illuminated LCD screen, 2 lines with 20 characters each
- Displays source of incoming calls
- Standard keypad and function keys
- Crystal clear High-Definition speech quality for optimum intelligibility
- Speaker volume control
- Paging microphone connection
- Powered by Power-over-Ethernet (PoE)

Communication can be performed using the telephone-style handset or made hands-free using the built-in speaker/microphone. Using peer-to-peer technology, communication is non-blocking and a practically unlimited number of speech channels are available. For even more flexibility, add the **eSeries** Desk Microphone to quickly page a specific location or for use with a headset.

eConsoles are immediately operational and ready for use once connected to a LAN. Power-over-Ethernet technology simplifies installation and eliminates all network administration headaches. Additional configuration or programming of the eConsole can be performed using an ePort, a device that connects to the LAN and to a laptop or desktop computer.

The Telecor **eSeries** Network Intercom system can scale according to your facility's needs and size by adding additional eConsoles. The eConsole's capabilities, ease of installation, and use make it an attractive addition to any **eSeries** solution.
